- U10 (2 Jan 2016 or after)
- U12 (2 Jan 2014 or after)

Please circle: Boy or Girl

Please read the following rules.

- You have up to 2 hours for the problem solving paper. You may not need all that time. You may leave after handing in your answers.
- The questions generally go from easy to hard, so it's best to start from the beginning and go in order.
- You can use your chess board and pieces to help you.
- Each page show a question and the marks you can score. Please write your answers in the space under each diagram. Altogether, the test has 100 marks. Even if you don't give perfect answers, you can still get some partial marks.
- For endgame puzzles, show enough moves to reach a position where you are clearly winning or drawing.
- You don't have to finish them all, do your best and solve as many puzzles as you can.

Enjoy the problem solving.

Q15. The 5 Queens Domination puzzle. Place 5 queens on the board so that every square is attacked by at least one of the 5 queens. (6 marks)

There are 7,624,512 ($_{64}C_5$) possible ways to place 5 queens on the board. Among these pattern, only 4,860 patterns are valid solutions. In one episode of the "Take Take Take" YouTube channel, Magnus Carlsen took about 5 minutes to complete this task. Can you beat him?

Instruction:

Use your 5 pawns instead of queens. Fill 5 squares on the left board with the letter "Q". If you make a mistake in the left board, put a large cross over the left board and use the right board.

Answer:

Some of representative solutions are shown below.

The left solution shows the central queen surrounded by the other four queens in knight positions.

Five queens lie on a main diagonal in the middle solution and on a sub-diagonal in the right solution.
