NAME: _____

DATE OF BIRTH: _____

Please circle your age group:

- U14 (born in 2013 or after)
- U16 (born in 2011 or after)
- U18 (born in 2009 or after)

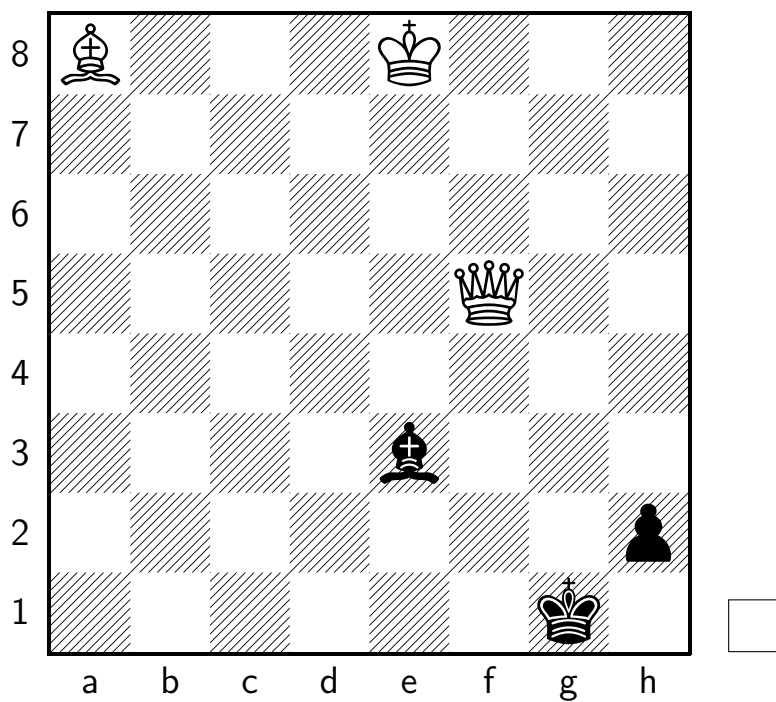

Please circle: Boy or Girl

Please read the following rules.

- You have up to 2 hours for the problem solving paper. You may not need all that time. You may leave after handing in your answers.
- The questions generally go from easy to hard, so it's best to start from the beginning and go in order.
- You can use your chess board and pieces to help you.
- Each page show a question and the marks you can score. Please write your answers in the space under each diagram. Altogether, the test has 100 marks. Even if you don't give perfect answers, you can still get some partial marks.
- For endgame puzzles, show enough moves to reach a position where you are clearly winning or drawing.
- You don't have to finish them all, do your best and solve as many puzzles as you can.

Enjoy the problem solving.

Q15. 8 Queens Independent puzzle. Place 8 queens on the board so that all 8 Queens don't attack each other. (6 marks)

Do you know? There are 4,426,165,368 (${}_{64}C_8$) patterns to place 8 queens on the board. Among those pattern, only 92 patterns are correct. In one episode of "Take Take Take" YouTube channel, Magnus Carlsen took 8 minutes 20 seconds to complete this task. Can you beat him?

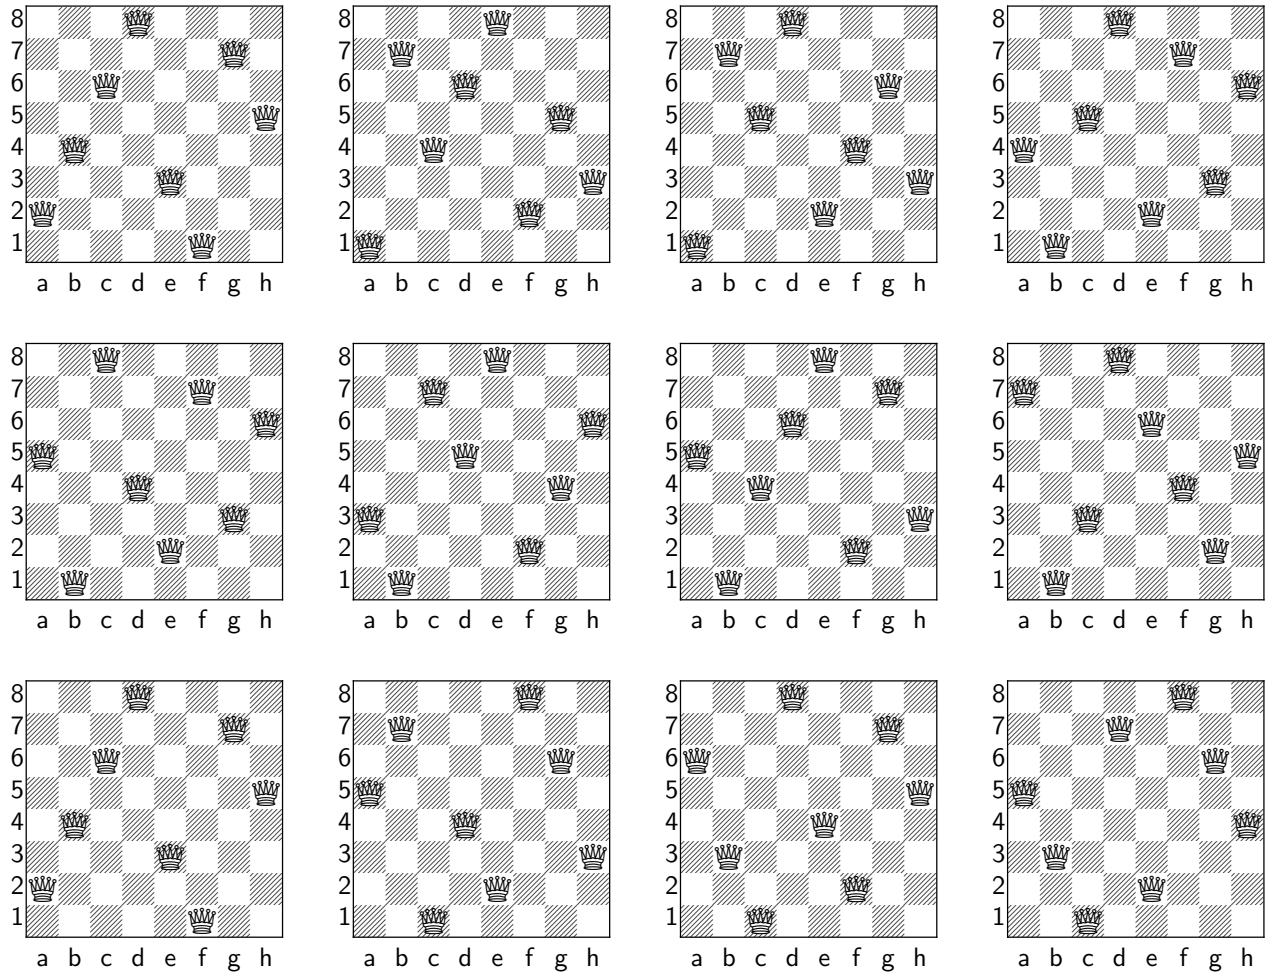

Instruction:

Use your 8 pawns instead of queens. Fill 8 squares in the left board with the letters "Q". When you make mistakes in the left board, write a large cross on the left board and use the right board.

Answer:

There are 12 fundamental solutions as below.

Each fundamental solution (except the right bottom solution) has 8 variants (its original form and the forms rotated 90° , 180° , or 270° , and their mirror images). The right bottom solution has only 4 variations as its 180° rotation is identical to the original solution. Therefore, the total number of the distinct solutions is 92 ($8 \times 11 + 4 \times 1$).
